

Project Design Phase – Part 2

Requirement Analysis

Date	03 Nov 2023
Team ID	NM2023TMID04665
Project Name	Build an Event Management System using Salesforce

Requirement Title: Event Registration Process

Requirement Description: Users should be able to register for events using their Salesforce accounts or by creating new accounts, and they should receive real-time confirmation and access to event resources.

Use Case:

- When a user visits the event management system, they can browse and view a list of upcoming events.
- The user can choose to register for an event by clicking on the event's details.
- If the user already has a Salesforce account, they can log in using their existing credentials.
- If they don't have a Salesforce account, they should be able to create a new account by providing their name, email address, and password.
- The system should verify the email format, ensure email uniqueness, and check if the event has available slots.
- After successful registration, the user should receive a real-time confirmation and immediate access to event resources, such as session schedules, speaker details, and event-related documents.
